WORK EXPERIENCE

Software Engineer Intern Tallahassee, FL
Florida Department of Health Sept 2025 – Present

- Designed Power Automate flows that save **20 hrs/ week** per employee by reducing manual processing across multiple teams.
- Built multiple applications allowing health officials to submit, track, and manage data, increasing visibility by **20%**
- Created interactive Power BI budget dashboard tracking expenditures, forecasts, and variances for **8** programs, streamlining financial reporting and reducing **15+** hours of manual reporting by incorporating data from multiple SharePoint Lists

Software Engineer Intern Remote
Ryder Systems June 2025 – Aug 2025

- Improved features for internal CMS using C#/.NET, enhancing performance and maintainability for internal web applications
- Automated daily tasks from production support cadence, reducing manual overhead saving **15** hours a week per employee by using Power Automate
- Developed a **1st place**-winning onboarding application using React, SQLite and Okta API alongside 3 interns to streamline new user assignment and access control during Ryder Hackathon

Web Developer Intern Tallahassee, FL
Florida State University Oct 2024 – May 2025

- Streamlined communication with 5 departments to ensure timely website updates, improving information accuracy for over **45k+** students
- Improved website issues such as slow load rates and formatting issues by using services like Google Analytics and SiteImprove
- Developed and maintained dynamic websites using Drupal, HTML and CSS ensuring optimal user experience

Software Engineer Intern New York, NY
Bank of America June 2024 – Aug 2024

- Implemented scalable data ingestion pipelines using Apache Spark to process and transform large-scale datasets within BofA's production risk infrastructure
- Automated job scheduling workflows in Autosys to orchestrate data processing tasks, ensuring reliable execution across production control frameworks

Software Engineer Intern New York, NY
Bank of America June 2023 – Aug 2023

- Designed and implemented GraphQL APIs for enterprise risk tooling within the Financial Crimes Tech team, improving accuracy of DNDB entity detection and resolution
- Developed flexible schemas to optimize data queries and enhance performance for front-end applications
- Collaborated with intern team to build Python-based Acronym Search and Organizer tool with DearPyGUI interface, cleaning and standardizing **700+** acronym entries from JSON files to improve organizational knowledge management

PROJECTS

- **Bot Detection Classifier** | Python, scikit-learn, pandas, spaCy — Trained and evaluated a Random Forest classifier on engineered behavioral and NLP features, achieving ~90-95% accuracy
- **Vesania** | React, TypeScript, PostgreSQL, Prisma, Docker — Collaborative digital card game bridging NFC physical cards with web-based combat. Led all UI/UX development using Figma, creating imaginative pages with React and TypeScript. Worked with 5 team members holding agile meetings and effectively using git for version control.

EDUCATION

Florida State University *Bachelor's in Computer Science, Minor in Humanities* Expected May 2026
Relevant Coursework: Pattern Recognition (Machine Learning) | Advanced Programming in Java | Full Stack Development in C# | Software Engineering Capstone | Theory and Struct. Of Databases
Involvement: Director of Recruitment at FSU SHPE, ColorStack, Rewriting the Code, ACM, STARS Alliance

TECHNICAL SKILLS

Programming Languages: C++, C#, TypeScript, Python, Java, SQL, HTML, CSS, Bash
Tools & Technologies: Git, React, Node.js, REST APIs, Docker, scikit-learn, pandas, AWS, Hadoop, Power Automate, PowerBI, GraphQL, PostgreSQL, SQLite, Agile/Scrum, CI/CD, Linux
Awards: Severiano Jorge Endowed Scholarship, ColorStack SHPE 2024, Rewriting the Code SHPE 2022
